

A cut above the rest

**Unique Daikin Round Flow cassette now
available for all Sky Air outdoor units**

Wednesday November 9th 2016

Daikin's unique Round Flow cassette is now available for connection with all Sky Air outdoor units. Suitable for busy commercial, retail and leisure environments this unique cassette offers a maximum comfort and efficiency savings.

Highest ever energy-efficiency

Daikin's Round Flow cassette delivers all year round high performance, thanks to the integration of seasonal efficiency features. Energy-saving inverter technology automatically selects heating or cooling mode according to desired temperature settings, whatever the weather outside.

A unique auto-cleaning panel has been proved to deliver up to 50% energy savings with automatic filter cleaning. Dust can be removed easily with a vacuum cleaner without opening the unit, minimising business disruption and optimising performance. In addition, the optional presence sensor provides intelligent control to suit room occupancy, saving up to 27% more on energy, giving the user assurance of the lowest possible operating costs.

Flexible solution

The Round Flow cassette can now also be specified with the AZQS inverter range, enabling installers to provide a comprehensive and reliable HVAC solution across all types of commercial, retail and leisure environments.

Suitable for any décor, Daikin's Round Flow cassette provides a discreet solution integrated in the ceiling with only the panel showing. Round flow cassettes are perfect for uniform air distribution in large spaces because of their long 360° air flow, making them an ideal choice for light commercial applications such as shops, restaurants and small offices without deadspots. The optional presence sensor control redirects airflow intelligently and even temperature distribution with no draughts. The floor sensor automatically diverts airflow to ensure an even temperature, between the ceiling and floor, avoiding cold feet. Flaps can be individually adjusted from a remote, wired controller to suit any room layout, directing heating or cooling to where it is needed.

The compact design is perfect for easy installation in awkward corners, along walls, or in irregularly shaped rooms.

Availability

The Round Flow cassette's minimal visual impact, even temperature distribution, and quiet operation contribute to create an inviting atmosphere for clients and staff, offering a comprehensive, energy-efficient solution with minimal maintenance requirements.

Available from this month in pair combinations with AZQS71/100/125/140 in single phase operation and with AZQS100/125/140 in three phase operation, this latest addition to the line-up is set to provide comfortable, energy efficient solutions to suit an even wider range of commercial premises.
